

CLAIMS:

1. An apparatus for casting metal strip, comprising a casting roll, a metal delivery system to deliver molten metal onto the surface of the casting roll and a roll brushing apparatus to clean the roll surface, the brushing apparatus comprising:

at least one brush mounting frame;

a main brush mounted on one said mounting frame to extend across the roll and capable of tangentially engaging the peripheral longitudinal roll surface of the casting roll;

an elongate rotary sweeper brush mounted on one said mounting frame to extend across the roll and capable of engaging the roll surface of the casting roll in advance of the main brush;

15 a sweeper brush actuator on one said mounting frame to move the sweeper brush into engagement with the casting roll near the beginning and end of each casting run and disengage from the casting roll during normal casting operation, and a main brush actuator on one said mounting frame to move the main brush into engagement with the casting roll surface at least during normal casting operation.

2. An apparatus as claimed in claim 1, wherein the sweeper brush is rotatably mounted on a brush mounting structure connected to the sweeper brush actuator.

25 3. An apparatus as claimed in claim 2, wherein the sweeper brush actuator and the main brush actuator comprise fluid actuatable cylinder devices.

4. An apparatus as claimed in claim 2, further comprising an elongate scraper mounted on the brush mounting structure to move with the sweeper brush and engaging the sweeper brush so as to scrape swept material from the sweeper brush.

30 5. An apparatus as claimed in claim 4, wherein the sweeper brush comprises a central brush body and a plurality of bristles projecting radially outwardly from the central body and forming collectively a substantially cylindrical shape and the scraper comprises an elongate scraper blade projecting into the bristles of the brush.

TOP SECRET//COMINT

6. An apparatus as claimed in claim 5, wherein the bristles are formed of steel wire.
7. An apparatus as claimed in claim 6, wherein the scraper blade is made of hardened steel.
- 5 8. An apparatus as claimed in claim 1, wherein the main brush is an elongate rotary brush and the main brush mounting frame carries main brush drive operable to rotate the main brush.
9. An apparatus as claimed in claim 1, further
10 comprising sweeper brush drive operable to rotate the sweeper brush.
10. An apparatus as claimed in claim 9, wherein the sweeper brush is rotatably mounted on a sweeper brush mounting frame connected to the brush actuator and the
15 sweeper brush drive is mounted on the brush mounting frame to move with the sweeper brush.
11. An apparatus as claimed in claim 1, wherein the main brush mounting frame is moveable toward and away from the roll surface to move both the main brush and the sweeper
20 brush between retracted and operative positions.
12. An apparatus for casting metal strip, comprising a casting roll metal delivery system to deliver molten metal onto the surface of the casting roll and roll cleaning brush apparatus to clean the casting roll surface, the brushing
25 apparatus comprising a main brushing device extending across the roll capable of tangentially engaging the peripheral longitudinal roll surface and a second sweeper brushing device extending across the roll to engage the roll in advance of the main brushing device, the sweeper brushing device comprises an elongate rotatably driven barrel brush extending across the roll surface of the casting roll and mounted on a mounting frame, the main brushing device is mounted to rotate about its longitudinal axis and capable of being rotatably driven in engagement with the casting roll
30 at least during production of a casting run, a main brush actuator mounted on a mounting frame and capable of moving the main brush into engagement with the casting roll at during production of the casting run, a sweeper brush
- 35

- actuator on the mounting frame to separately move the sweeper brush toward the casting roll at the start and end of the casting run and away from the casting roll during the production part of the casting run, an elongate scraper 5 extending along the barrel brush and engaging the barrel brush so as to scrape swept material from the barrel brush.
13. An apparatus as claimed in claim 12, wherein the main brush actuator and sweeper brush actuators comprise fluid actuable cylinder devices.
- 10 14. An apparatus as claimed in claim 12, wherein the scraper is mounted on the brush mounting frame to move with the barrel brush.
15. An apparatus as claimed of claim 12, wherein the scraper is fixed to the sweeper brush mounting frame .
- 15 16. An apparatus as claimed in claim 12, wherein the sweeper brush comprises a central brush body and a plurality of bristles projecting radially outwardly from the central body and forming collectively a substitute cylindrical shape.
- 20 17. An apparatus as claimed in claim 16, wherein the bristles are formed of steel wire.
18. An apparatus as claimed in claim 16, wherein the scraper comprises an elongate scraper blade projecting into the bristle canopy of the barrel brush.
- 25 19. An apparatus as claimed in claim 18, wherein the scraper blade has a sharp leading edge.
